

Narrow your response gap

Can your organization respond to a cyber-attack before it escalates to a major incident?

Start

Ready, Set - Respond!

Responding to a cyber attack demands perfect timing. Rush to act and you risk your attacker retaliating. Delay and you could face a costly recovery process.

Too quick.

Perfect timing.

Too slow.

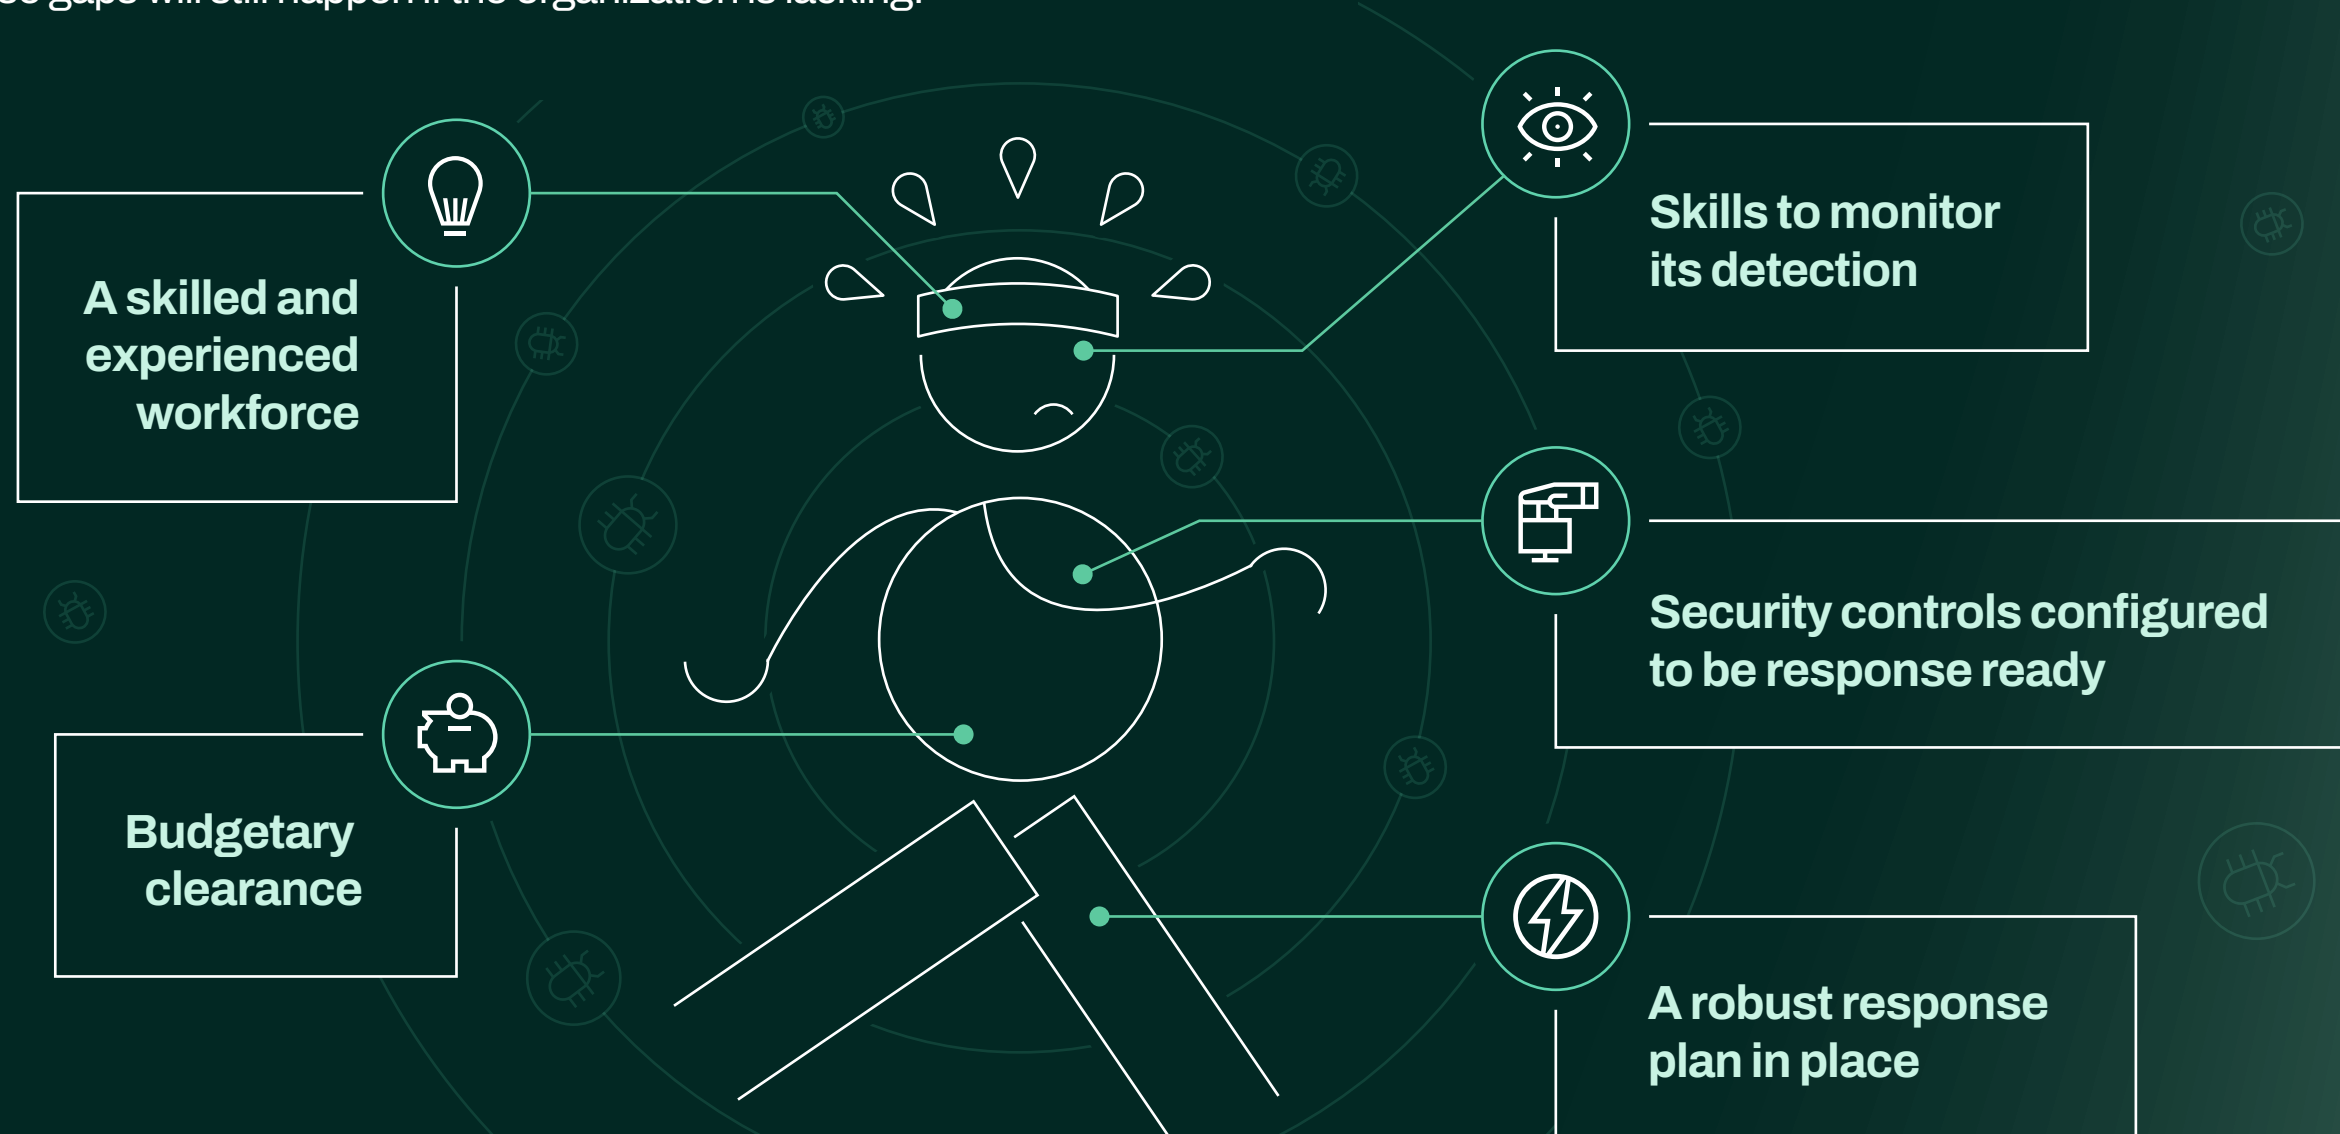

What is a Response Gap?

It's anything that delays an organization taking the right steps, at the right time, from the moment a security breach is first detected.

What are the biggest causes of response gaps?

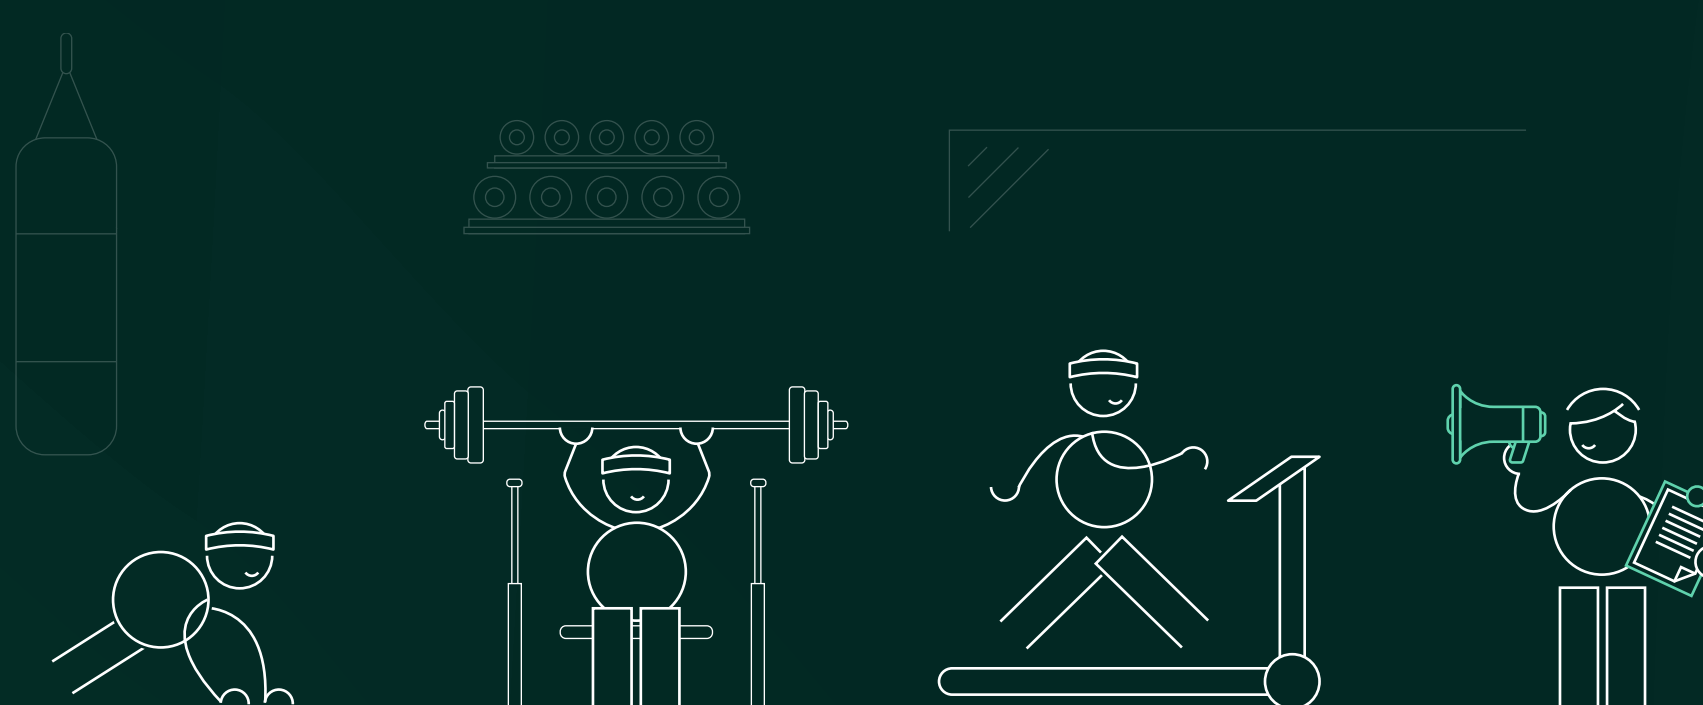

Even with the latest tools and technology in place to handle cyber attacks, response gaps will still happen if the organization is lacking:

What needs to happen next to start sharpening your operational reflexes and improve resilience?

Get proactively reactive

Three in five organisations react to individual cyber security problems as they arise*
It's time to find new ways to prepare.

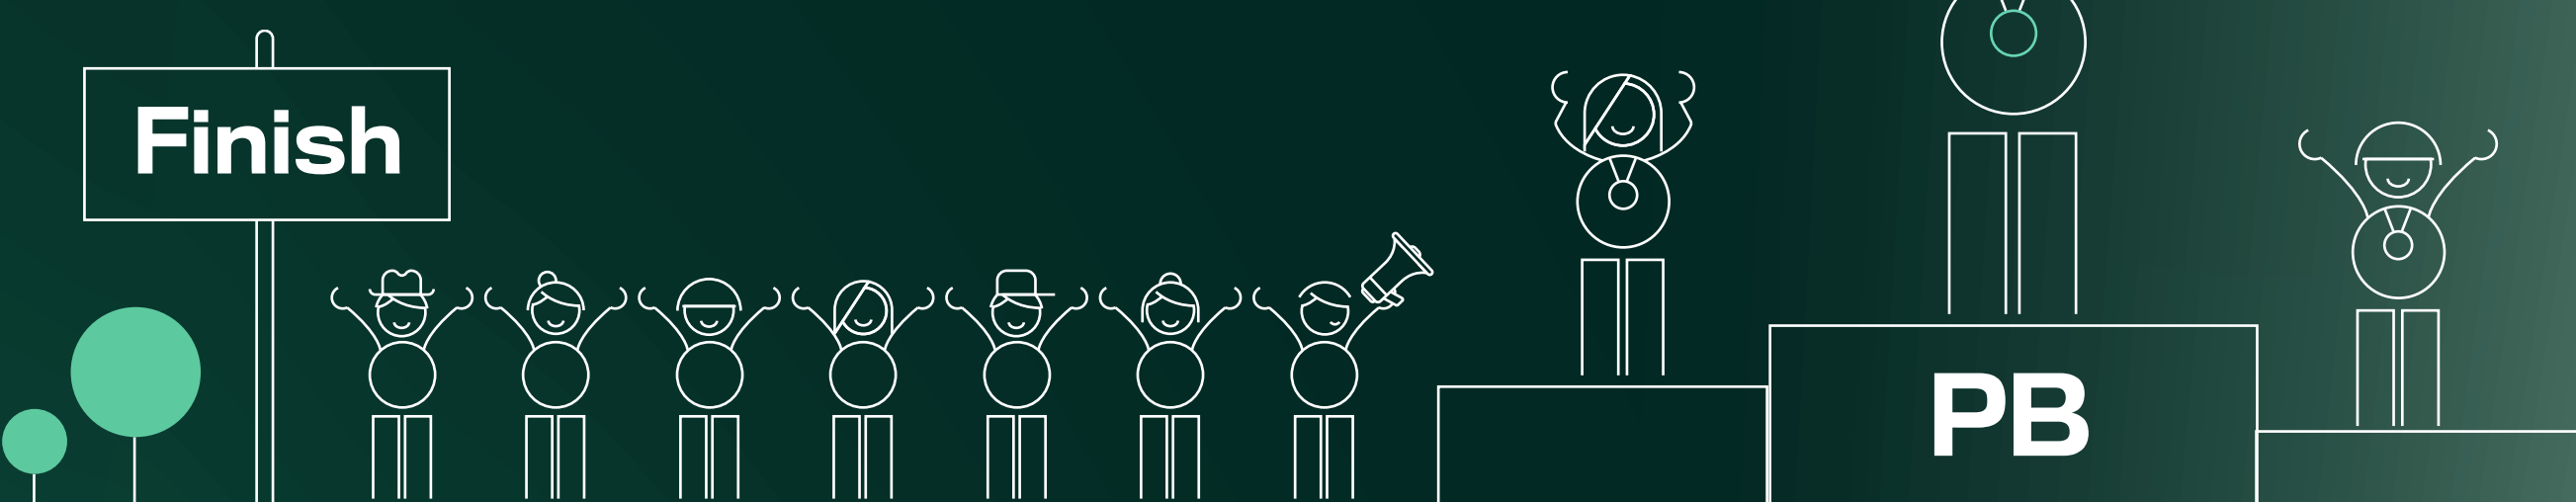

- ✓ Use frameworks to assess the readiness of your team and organization
- ✓ Rollout companywide readiness and training procedures
- ✓ Start to gather and process threat intelligence
- ✓ Invest in threat hunting

An unique gap assessment every time

The sheer variety of organizations, teams and threats makes each set of strengths and weaknesses unique to each case. Once you know where your unique response gaps are, you can begin a plan to close them.

Finish
